

LC-318

For high efficient welding of 50kgf/mm²
class high tensile strength steel

Applications

Welding of 50kgf/mm² class high tensile strength steel of ships, bridges and pressure vessels.

Characteristics

LC-318 is iron powder low hydrogen type electrode for all-position welding. Its usability is the best with direct current application as well as alternating current application.

Notes on usage

- (1) Dry the electrodes at 300~350°C for 30~60 minutes before use.
- (2) Adopt back step method or strike the arc on a small steel plate prepared for this particular purpose to prevent blowholes at the arc starting.
- (3) Keep the arc as short as possible.
